Effective, Powerful, and Affordable

IntelliKeys® means physical, visual, and cognitive access for people with a wide range of disabilities. Considered by many to be the leading assistive technology tool in the world, IntelliKeys is the centerpiece of a complete system of communication, education, and fun.

Easy to use

Simply choose the proper cable and plug IntelliKeys directly into the keyboard port of a Macintosh,® PC-compatible, or Apple II computer. Slide in an overlay and you're up and running.

It's that easy. Each standard overlay has a bar code that is instantly recognized by IntelliKeys. People who use switches can choose from two built-in programmable switch jacks. IntelliKeys works with all software-if the software runs with a regular keyboard or mouse, it will work with IntelliKeys! from IntelliTools and several other publishers.

Built-In Access

IntelliTools understands the access needs of people with disabilities. For the user that has difficulty pressing two keys simultaneously, IntelliKeys allows the user to press the SHIFT key followed by a letter key to type a capital letter-two keys in succession, not two keys at one time. For the user who cannot use a mouse, IntelliKeys comes with a standard arrows overlay, allowing the user to move the cursor in any direction (IBM compatible mouse access through AccessDOS and Access Utilities for Windows). IntelliKeys has many other built-in access features as well.

Smooth Operation

Like most computer keyboards and mice, IntelliKeys does not tap your computer's memory or conflict with software applications. IntelliKeys retains the memory of custom overlays and special settings for disability access. IntelliKeys uses its own 32K of battery-supported memory built in, so that custom overlays and

special settings remain, even when the computer is off.

Comes with eight standard overlays

Four elementary overlays are designed for people of a young cognitive age. They contain the right keys to work with common software programs. Keys are large and well-spaced for physical access. Arrangements are alphabetical and logical for cognitive access. Contrasting colors enhance visual access.

QWERTY overlays for Macintosh and PC-compatibles are excellent for people with strong cognitive and visual abilities, but more limited fine motor skills. Use the QWERTY overlays with special settings for enhanced physical access.

The setup overlay allows you to make many special accommodations for physical access. For people who inadvertently drag their fingers across unwanted keys, the response rate can be adjusted. For those who cannot use a mouse, you can turn IntelliKeys arrows into mouse arrows with completely adjustable speeds! For people who remain on a key too long, you can adjust the repeat rate. Many other important adjustments are possible.

A clear overlay made of durable plastic is included. Use it to protect all of your custom overlays.

Two built-in switch connectors

IntelliKeys is a powerful and flexible switch interface. Choose from 11 settings that work with popular switch software. Switches can be further customized with [Overlay Maker®](#) software. Use a [Buddy Button, Big Red,® or Jelly Bean® switch](#). As long as the switch has a mini-jack connector (most switches do), it will work with IntelliKeys.

Snap-In Keyguards

(image of Snap-In Keyguards for IntelliKeys)

These lightweight keyguards simply snap into IntelliKeys on top of an overlay. Keyguards help the user make accurate choices by preventing unintentional keystrokes and providing stability for the user. The black color enhances visual discrimination. Watch your students progress from two large keys to 20 smaller keys. Both sets come with a Macintosh disk of Overlay Maker templates that match the eight Snap-In keyguards. Creating overlays is a breeze. (Note: Snap-In Keyguards work on any IntelliKeys and do NOT require a Macintosh computer.)

Snap-In Set #1 KG-SNP-1 \$125

Includes four keyguards with the following number of holes: 2, 3, 4 and 6

Snap-In Set #2 KG-SNP-2 \$125

Includes four keyguards with the following number of holes: 9, 12, 15 and 20
